                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
```

```
A.Pathway: ethanol catabolism
A.Note: encymes with this activity are invelved in direcse metabolic puthways in vari
C.Superfamily: aldehyde dehydrogenase (NAD+); aldehyde dehydrogenase homology
C.Superfamily: alcohol metabolism, homotetramer, introdhondrion, NAD, oxidoreducta
F.1-20/Domain: transit peptide (mitochondrion) status predicted <INP>
F.21-51//Product: aldehyde dehydrogenase (NAD+) 5 #status predicted <AMT>
F.25-33%Domain: aldehyde dehydrogenase (NAD+) 7 MLDC.

CALALLIC ACTIVITY An addedyde - VADIC.) - H(2)O an acid - NADH.

CALALLIC ACTIVITY An addedyde - VADIC.) - H(2)O an acid - NADH.

SCHAMAY: ELHanol utilization; second step.

SUBCELLARLA LOCATION: Mitochondial matrix.

INDCTION: By retinoic acid; 3 5 fold increase.

SIMILARITY: BELONGS TO THE ALDEHYDE OBHYDRAGENSES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        - Caps
